The Canon Speedlite 580EX offers a secure mount, a flashpoint flash diffuser, and a charger with four NiMH batteries. The flash kit comes with a hot metal shoe mount that has a sturdy locking component for a sure lock with the camera. The Canon flash kit has a metering sensor for auto exposure control as well as a PC socket to be used in combination with slave triggers. The Canon Speedlite 580EX is completely compatible with all Canon EOS SLR cameras and is designed to resist moisture and dust. The flash kit offers automatic conversion of flash with the compatible models of cameras. The Canon flash kit automatically communicates information to a compatible Digital Single Lens Reflex XDSLR camera. The Canon Speedlite 580EX weighs 2.3 lbs and has a stable, secure mount on top of the camera. My first flash was the Canon 540eza great flash itself! The 580ex does an EXCELLENT job of lighting the subject with the right amount of light. I photographed a wedding reception where yellowishgolden lighting was used in the ballroom and we wanted to keep that hue in the pictures.

The subject all looked natural and robust! I was using a Canon T5 camera body for this shoot as I had not purchased the Canon 6d yetbut I have as no this writing and look forward to using this flash with itKnowing how to adjust flash strength, knowing its coverage distance, etc.Knowing how and why to change the Fstop on your camera, the shutter speed, how to change the flash settings, etc.The flash is not really heavy once you spring to action. I shot about 100 pics that night. Just DONT mix then in the flash.. Using the bounce ability of the flash produced some very good shots. NO shadows to talk about. The makeup jobs on the women were hilighted in detail due to the flash and the pictures were as looking at professional models wearing Hollywoodlevel makeup. Good Job, ladies! Canon 580ex is not hard to use. Learn the settings. Learn YOUR CAMERA. Everything is taken care of so you can concentrate on the subject. User friendly, started using it right out of the box. The master and slave options made this a buying feature for me. I bought it for my older EOS 5D mk1 camera. At a good price it delivers professional results and compatibility with other studio devices. It works great with my 7D MK II and 5D MK III. It can be used as a master to control slaves. Set up is easy. Just look up the manual and push buttons. Verisign. Other features include a metal hot shoe with an improved locking mechanism for added durability, an external metering sensor for nonTTL automatic flash exposure control and a PC Terminal for use with nondedicated slave triggers. Bruno Freitas 5.0 out of 5 stars Here is what i liked about it so far.Just about what the manual says.

100300, depending on how much light power you will be demanding from it. 4. I am still about to find more good stuff about it. As for the size. As for the catchlight. The CONS 1. Its Expensive. A Big Drawback for some. 2. The Battery door compartment, could be better on a piece of equipment like this. Like said before. It is what you pay for. The best on its category. this go for all Canon Lovers;Con Have to repeat it like other reviewers battery door is a joke. Need to be very careful with it.

AWB becomes much warmer when bounces. Manual bounce fixes the problem. The white panel doesnt help much. This is quite unacceptable for a flash this expensive. I consulted experts on the canon forum, it seems to be a common problem. Now I only flash straight. Be prepared to use manual mode if you bounce if you dont want your picture to look awfully warm. Why does it need the push button to turn the flash head. Ok, the new 580EX II turns 360 degrees, an improvement. But not by much. Why not continuous bounce angles 580EX still does the same thing as 420EZ from 20 years ago. About time to progress a bit here This one held really well and never missed an exposure in an Indian wedding. If you didnt know, a typical Indian wedding lasts for days, but this was an abbreviated one, and was put to work for a full 24 hours. Not one bad exposure. Specifically, the best part about this flash is that you can hardly see that a flash was used. A little difficult when working on Aperture priority as the camera tries to expose the overall image and not just the subject, but set it to high speed sync and fire away. In case you need to adjust the image, Canon raw format is very dynamic to take care of that. A little work around, but perfectly acceptable to me. Bouncing this lens on the ceiling takes the pictures one notch higher in IQ. Most ceilings are a shade of yellow, so the very mild yellowish pitch almost invisible actually becomes richer and acceptably warmer colors showing healthy and happy people, not a rabbitlookingattheheadlights look. Bouncing also avoids harsh shadows and is just a clear winner. The catch light panel is quite helpful, and does a fantastic job of producing a light gradient when the subject is up close. Highly recommend using that feature. Considering buying one more to along with the transmitter to work in tandem wireless mode, but just started saving pennies for that. Good buy, take a look at the Mark II version before you swipe your visa card for this.

In fact, the 580 is a worthwhile upgrade. I like the new dial on the back for adjusting exposure compensation, etc. I can machine gun my 1Ds2 and this flash keeps up. The 550 could not. It is small enough not to overwhelm my little Rebel too. I did note that there is some vignetting at 24mm with a direct flash unless I drop the wide lens screen. The manual says ths will not happen but it does. Not a big deal since I use a Gary Fong diffuser or bounce flash almost always. Like the other reviews, the battery door is flimsy. However, be prepared to read the manual on the inner workings of this flash. This flash has many features at a cost of being somewhat complicated to use outside of fully automatic mode. I would highly recommend this flash if you are a serious professional photographer. It has a nice bounce flash and illuminates the subject nicely, but it has a complex array of features. You will need to carry the manual to remember how to program this flash. I suspect most people will use a very limited subset of all the options available with this flash. For this reason, I believe this flash is overkill for most people. Loaded with 4 AA batteries, the flash makes the camera fairly heavy. The bounce flash and rotating head feature are nice, but moving the flash head requires depressing a button with one hand while holding the camera with your other hand. I found this to be awkward. I highly suggest doing a Google search on the flashes manual and reading it thoroughly before purchasing. Youll see the LCD panel to be very complex. If youre not a manual reader, this flash could prove to be a challenge outside of automatic mode. If you need a powerful flash that takes outstanding pictures and has every function imaginable, this flash might be for you. EOS M og EOS Rserierne af spejllose fullframekameraer leverer samme styrke som et digitalt spejlreflekskamera i et kompakt kamera.
